

## KTM SERIES EB OM-2 SPLIT BODY FLOATING BALL VALVES

A new generation of ball valves with fugitive emission control and ISO mounting pad

### FEATURES

- Superior valve design at a competitive price.
- Fugitive emissions control for flammable and non-flammable applications.
- Valve fugitive emissions capability third party certified to ISO 15848-1.
- Machined ISO actuator mounting pad.
- Pure white E-seat (PTFE/PFA copolymer) seal relieves concern over product contamination.
- Positive alignment of split body.
- Fire test certified to API 607 5th edition and ISO 10497.
- PTFE bearing and packing rings reduce wear.
- Lower operating torque for ease of operation and reduced actuator cost.
- Positive position indication.
- Blowout-proof shaft.
- NACE MR-01-75 available on request.
- Locking device is available.
- Static electricity grounding device.
- Manufactured under ISO 9001 certified quality system.
- CE marking PED 97/23/EC as standard.
- Various seat types are available.

In addition to standard E-seat, various seats are available in following variety. Each seat option will meet a wide range of performance, suitable for many applications.

- PTFE/PFA copolymer
- E-seat (standard)\*
- PEEK-seat (option)
- Grattite®-seat (option)
- Metaltite®-seat (option)

\* Please refer to the Pressure-Temperature rating

### GENERAL APPLICATIONS

Pulp and paper, reactive monomers, oil and gas production, steam, hot gases, toxic and lethal, fire-safe and flammables

#### Option

- Shaft extension
- For cryogenic, oxygen and vacuum services
- Special painting
- Special tests
  - X-ray (RT)
  - Liquid penetrant (PT)
  - Positive Material Identification (PMI)

### TECHNICAL DATA

Model/sizes:	Full bore EB11, EB12 DN 15 to DN 200 Reduced bore EB21, EB22 DN 150 to DN 250
Pressure rating:	ASME Class 150, 300 JIS 10K, 20K (JPI also available)
Temperature:	-29°C to 270°C (Depending on options -196°C to 500°C is available)
Seat leakage:	Zero leakage (E-seat) to ISO 5208 rate A and API 598

# KTM SERIES EB OM-2 SPLIT BODY FLOATING BALL VALVES

**ISO5211 ACTUATOR MOUNTING PAD:**  
Machined 'automation pad' allows precise mounting of actuator; mounting bolts independent from shaft-packing gland bolts. Exact alignment reduces torque requirements and prevents out-of-line wear.

**RADIAL THRUST BEARINGS:**  
Radial loading absorbed and friction from axial shaft loading reduced. Dual thrust bearings support shaft for extended cycle life and superior thermal characteristics.

**BLOW-OUT PROOF SHAFT AND PRIMARY SHAFT SEAL:**  
Shaft shoulder is integral part of shaft, retained internally to prevent shaft blowout from pressure in body cavity. Primary shaft seal prevents leakage to atmosphere, also serves as low-torque bearing.

**PRECISE, SMOOTH BALL:**  
Ball sphericity and surface finish are key factors in attaining long valve life, low operating torque and superb pressure-holding capacity.

**RIGID SPLIT BODY:**  
Designed with extra bolts to assure positive alignment and maximum protection against bending stresses in the piping and forces produced by thermal distortion; designed with secondary metal to metal seal in the event of fire.

**FUGITIVE EMISSIONS CONTROL:**  
Multiple layers of adjustable PTFE chevron packing rings for standard models; while graphite braided / die-formed seals are used for models tested to API 607 5th edition.

**LIVE LOADED SPRING:**  
Belleville washer keeps constant force on shaft-seal packing, ensuring seal integrity and extended valve life.

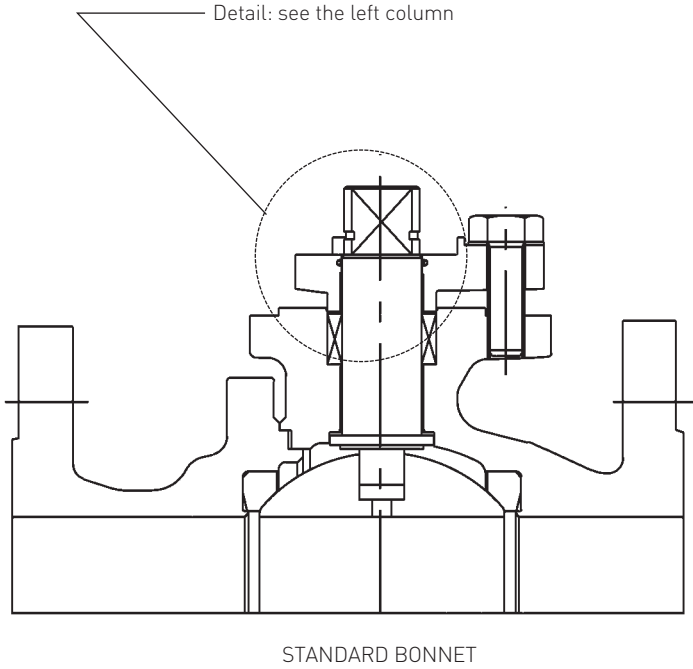

**CAST BLEED-PORT BOSS:**  
Provision can be made for drain bleed port when required. (Not shown)

**ANTI-STATIC GROUNDING:**  
Special retaining spring provides positive ground for use with volatile or flammable liquids. (Not shown)

# KTM SERIES EB 0M-2 SPLIT BODY FLOATING BALL VALVES

## STANDARD PRIMARY CONTAINMENT SEALS FOR FUGITIVE EMISSION CONTROL

### STANDARD SEALS

Superior quality multi-layered, adjustable chevron packing rings as shaft seals.

### FIRE TESTED (OPTION)

Die-formed carbon fiber seals, sandwiched by braided graphite rings. Fire safe in design, minimizing leakage in the event of fire. Fire tested to API 607 5th edition.

## OPTIONAL SECONDARY CONTAINMENT SEALS FOR FUGITIVE EMISSION CONTROL / TOXIC AND LETHAL APPLICATIONS

### CHEVRON PTFE PACKING (OPTION)

Double packing gland elastomer seal with a lantern ring. If media leaks through primary seal, it can be detected and stopped by pressure injection.

### FLAMMABLE SERVICES (OPTION)

Double packing gland graphite seal and lantern ring.

PHOTO (A)

PHOTO (B)

The OM-2 is available in three basic types of seats: soft, Gratiite® and Metaltite®. Each offering a range of performance suitable for many applications.

## SOFT SEAT

Choose from two soft seat materials: the standard E-seat PTFE/PFA copolymer or PEEK. Each type of seat is retained in the same manner and is machined with a protective lip, designed to eliminate seat deformation and cold flow. This same lip acts as a secondary back-up seal, which forms a metal to metal contact in the event the primary soft seal is burnt in a fire (see details, right).

The E-seat offers process purity, strength, integrity, low permeability and high resiliency. It is composed of a unique molecularly enhanced copolymer of PTFE and PFA. It offers a full range of properties formerly requiring two separate materials. The E-seat provides pressure and temperature capabilities previously available only with glass or carbon fiber-reinforced PTFE. In high-temperature operations, the seat remains white, eliminating the problem of color contamination associated with seats made from darker reinforced materials. The E-seat is excellent on a wide variety of applications but is particularly recommended for use on styrene and butadiene, where low permeability is a required performance factor; and on low-pressure steam, where flaking of virgin PTFE is a problem. It is also recommended for use on food and beverage, pharmaceutical and biotech, paper, clean gas and any other applications where product purity and the lack of foreign fillers are critical to process media integrity.

The Popcorn Factor: the photo (A) shows a virgin PTFE seat after the attack by a reactive monomer (in this case, styrene). The material's molecular matrix was penetrated by the vapor pressure of the uninhibited monomers, resulting in a polymeric reaction, commonly known as 'popcorn polymerization'. This reaction can totally destroy the seat material.

The photo (B) shows the results of the E-seat copolymer tested by KTM. Using butadiene, generally considered the worst-case scenario due to its small molecular size, the test ran for two years at 0.84 MPa and 82°C. The seats experienced minimum distortion and, after the two-year period, did not leak in service. Pressure tests after removal, at 1.1 times of design pressure, also showed no leakage. The photo shows two of the tested seats and a new seat in the middle for comparison.

ANTI COLD FLOW FEATURE

SECONDARY BACK UP SEAL

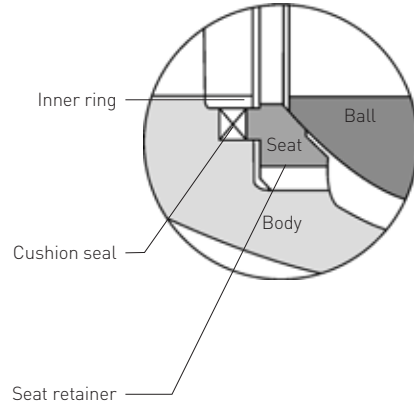

# KTM SERIES EB OM-2 SPLIT BODY FLOATING BALL VALVES

## GRATITE™ SEAT

A proprietary product for high-temperature, high-pressure, flammable and corrosive critical-process applications, the KTM Gratite® seat offers superior performance and reliability. Gratite® is a bonded composite of hard graphite material. The cushion seal provides resiliency during thermal expansion-contraction. The result is a seat with physical properties that are far superior to conventional ball valve seats of carbon graphite construction.

- More economical than Stellite
- High resistance to thermal shock

Gratite® is a registered trademark of Emerson Japan Co., LTD.

## METALTITE™ SEAT

KTM utilizes proprietary processes with special lapping technologies to provide a higher-quality product with a superior level of performance. Suitable for temperature range up to 500°C, the Metaltite® metal seat provides high performance solutions to many difficult and bidirectional applications. Precision lapping of the ball-to-seat fit result in superior interfacing and a tight shut-off conforming to FCI 70-2 Class V and Class VI (option). Available with two different ball coatings: Hard chrome or nickel alloy overlay. Durable stellite stainless seats are highly corrosion and erosion resistant. PTFE or soft carbon shaft seals are available.

Metaltite® is a registered trademark of Emerson Japan Co., LTD.

## STANDARDS

Design:	ASME B16.34
Face to face:	ASME B16.10, JIS B2002
End connection:	ASME B16.5, JIS B2220
Testing:	ASME B16.34, API 598, API 6D
Fire test:	API 607 5th edition
Quality assurance:	ISO 9001

### NOTES

- Weights for DN 150, DN 200 and DN 250 indicate lever operator.
- For gear operated, add 14 kg for DN 150 (reduced bore DN 200) and 35 kg for DN 200 (reduced bore DN 250).
- Face to face dimensions for EB21 size DN 150 to DN 250 and EB22 size DN 200, DN 250 are complied with ASME B16.10 short pattern.

- D: Outside diameter
- C: Bolt circle diameter
- G: Raised face diameter
- T: Flange thickness
- N: Number of bolts
- h: Bolt hole size
- d: Bore diameter
- d1: Ball bore

## PRESSURE/TEMPERATURE RATING (E-SEAT)

KTM seat ratings: The pressure and temperature limits of various KTM seat materials are available upon request. Below is an example of E-seat [PTFE/PFA copolymer] used for valve sizes from DN 15 to DN 250. Seat ratings for high-temperature valves with Grati® seats are identical to ASME body ratings.

- ① Full bore (DN 15, DN 20)
- ② Full bore (DN 25, DN 65)
- ③ Full bore (DN 80, DN 100)
- ④ Full bore (DN 125, DN 150),  
Reduced bore (DN 150, DN 200)
- ⑤ Full bore (DN 200), Reduced bore (DN 250)

- Solid line — indicate trim rating.
- Dashed lines indicate body ratings.
  - WCB
  - CF8
  - CF8M
- Materials in parentheses indicate equivalent JIS material

- If continuous service condition is in shaded area for DN 125 to DN 200, trunnion type KTM Ball valve is recommended.
- Maximum pressure / temperature rating  
ASME Class 150: 1.4 MPa / 120°C  
ASME Class 300: 3.4 MPa / 120°C
- E-gasket (PTFE/PFA copolymer) is used for the body gasket in Class 150.  
Y-gasket (ceramic filled PTFE) is used for the body gasket in Class 300. For temperatures exceeding 230°C, the Y-gasket in graphite construction must be used for both Class 150 and 300.

## BODY STYLES

OM-2 split body floating ball valves					
Code	Body style	Bore	Connection	Pressure class	Sizes
EB11	Floating type	Full bore	Raised face or smooth finish	ASME 150, JIS 10K	DN 15-200
EB12	Floating type	Full bore	Raised face or smooth finish	ASME 300, JIS 20K	DN 15-200
EB21	Floating type	Reduced bore	Raised face or smooth finish	ASME 150, JIS 10K	DN 150-250
EB22	Floating type	Reduced bore	Raised face or smooth finish	ASME 300, JIS 20K	DN 150-250

# KTM SERIES EB OM-2 SPLIT BODY FLOATING BALL VALVES

## SELECTION GUIDE

Example		EB11	-	32	-	1E	A15	RF	25	GG
<p><b>Body style:</b> full bore, floating type, DN 15 to DN 200. <b>Body material:</b> 304SS. <b>Ball material:</b> SCS13A or SCS14A. <b>Seat material:</b> PTFE/PFA copolymer. <b>Packing material:</b> PTFE. <b>Shaft material:</b> 304SS or 316SS. <b>Pressure class:</b> ASME 150. <b>Connection:</b> raised face 125 to 250 AARH. <b>Valve size:</b> DN 25. <b>Option:</b> packing/gasket-graphite.</p> <p><b>EB11 - 32 - 1E A15 RF 25 GG</b></p>
